

Art Guard®

The standard in asset protection technology

Over 50% of art theft
is from family homes

The consequences of theft can be devastating and easily compounded:

- **Monetary:** Inadequate coverage and potential legal complications
- **Permanency:** Only 3-5% of stolen art is ever recovered. Other valuable assets? Never.
- **Emotional:** May go well beyond the monetary loss
- **Loss of Faith:** Erosion of confidence in law enforcement and those around you

Effective protection goes well beyond perimeter/intrusion security, which has to be turned off to allow normal activity in a home or institution. Proper layered security means object-specific protection on any valuable asset, 24/7.

Effective object-specific protection should be:

- **Comprehensive:** Covering any valuable stationary asset, including art, jewelry, antiques, collectibles, memorabilia and wine
- **Reliable:** Meeting security standards set by museums, galleries and high-end collectors
- **Safe:** Meeting conservation standards for delicate objects
- **Flexible:** Effective as a stand-alone system or interoperable with a variety of platforms from conventional to home automation
- **Standard:** Protocols to work with qualified security system installers/integrators and art handlers
- **Easy-to-use:** On par with wireless door/window sensors
- **Affordable:** Low initial and life cycle costs

Art Guard MAP technology solution
is that and more

*MAP sensors
integrated into
conventional
systems*

or

*Dedicated
plug-and-play
MAP System*
