

Art Guard®

The Next Level In Asset Protection Technology

MAP SYSTEM SILVER: Art Security Against Daytime Theft

Silver is Art Guard's easiest and most cost-effective way to provide special protection for temporary exhibits or traveling shows for larger museums and as the primary daytime protection from grab-and-run theft in galleries, smaller museums and historical houses. The MAP System Silver provides flexibility and comprehensive coverage for nearly any hanging or seated object with an audible response to events in a state-of-the-art, plug-and-play package.

The patented MAP (Magnetic Asset Protection) wireless sensor detects the movement of a tiny rare earth magnet, safely and discreetly attached to the surface of nearly any object, regardless of size. The MAP sensor is placed in proximity to the magnet and hidden from view. Any movement of either the magnet or the sensor triggers an immediate location-specific alert, activating a panel alarm.

MAP sensors communicate with the Resideo ProSeries control panel, with easy, touch-screen operation. Sensors are pre-enrolled in the panel for dedicated protection right out of the box. No wires to run and no security installer is required. MAP Silver accommodates up to 127 sensors to secure one painting or an entire show. All sensors are kept in memory for the next show or application.

The MAP System Silver is the ideal solution for response to lenders and insurers demands.

MAP V3 SENSOR FEATURES:

- Simple and discreet application with full support videos.
- Magnets available for any application.
- 3 modes of operation optimize for any hanging and seated objects.
- Museum conservator tested as safe for even the highest value art.
- MAP is the only sensor capable of protecting any stationary asset from theft.

MAP SILVER SYSTEM FEATURES:

- Touch screen panel for easy operation plugs into any standard power source.
- Pre-programmed MAP sensors with unique digital ID ship ready to install.
- 127 wireless zone capacity.
- 24 hr. back up battery.
- Supports remote wireless sirens and strobes.
- Completely portable. Use from show to show or gallery to gallery.

SPECIFICATIONS

- Sensor dimensions 2" x 2" x 1/4"
- 400 ft. sensor transmission can be enhanced with repeaters.
- Sensors use 2 x CR2450 Lithium coin cell batteries with 4-5 year life.
- The Honeywell/Resideo panel is UL tested
