REDEFINING ASSET PROTECTION

## MAP SYSTEM SILVER: Dedicated, Flexible and Expandable Art Protection

Silver is Art Guard's standard art security system and the easiest and most flexible way to provide special protection for temporary exhibits in larger museums and traveling shows and as primary daytime protection from grab-and-run theft in galleries, smaller museums or any other facility displaying stationary objects. The MAP System Silver offers 24/7 protection of assets when the main security is off to allow movement of visitors and staff in the facility.

The patented MAP (Magnetic Asset Protection) wireless sensor detects the movement of a tiny rare earth magnet, which can be safely and discreetly attached to the surface of an object. The MAP sensor is placed nearby—either behind a hanging piece or in, on or beneath a seated object. Both magnet and sensor are hidden from view. Any movement of either the magnet or the sensor triggers an immediate location-specific alert, activating an audible alarm in the panel.

MAP sensors communicate with DSC's self-contained Impassa control panel, an industry standard with over a decade of dependable service. Sensors are pre-enrolled in the panel so the system ships as plug-and-play right out of the box with multiple audible alerts. Simply plug into any power outlet. There are no wires to run and no security installer is required. Additional sensors—up to 64—can easily be added. Once a show is completed, simply unplug the panel. All sensors are kept in memory for the next show or application.

The Impassa panel can be easily upgraded with a phone module for texts and calls from a central monitoring station. The panel also has two programmable outlets for integration into a general security system. The MAP System Silver is the ideal solution for complete and affordable protection of assets.

### MAP Sensor Features:

- Simple and discreet application with full support videos.
- Magnets available for any application, regardless of size
- The safest solution for high value works
- 400 ft. sensor transmission can be enhanced with repeaters
- The only sensor capable of protecting any stationary asset

### MAP System Silver Features:

- Pre-programmed sensors with unique digital ID ship ready to install
- 64 wireless zone capacity
- Large panel keyboard and easy to read LED display
- Panel siren with capacity for 4 remote wireless sirens
- Completely portable. Use from show to show or gallery to gallery
- Upgrade with telephony and integrate into access control

### Specifications

- Sensor dimensions 2" x 2" x 1/4"
- Sensors use 2 x CR2450 Lithium coin cell batteries with 4-5 year life.
- Impassa panel UL tested
- Panel back up battery, 24 hrs. fully charged.
- Industry panel check in with sensors every 60 minutes

Art Guard strongly advises that sensors and magnets be affixed to artwork by a qualified art handler.
