## **MAP SILVER: Ideal Grab-And-Run Theft Prevention With Audible Alerts**

Silver is Art Guard's standard art security solution and the easiest and most flexible way to provide special protection for temporary exhibits in larger museums and traveling shows and as primary daytime protection from grab-and-run theft in galleries, smaller museums or any other facility displaying stationary objects. Audible alerts from the panel and/or wireless remote sirens signal any movement of a piece. The MAP Silver System offers safe and effective protection of assets when the main security is off to allow movement of visitors and staff in the facility.

The Silver System with the new MAP v2 sensor insures even broader coverage in any environment. In magnetometer mode the patented MAP (Magnetic Asset Protection) wireless sensor detects the movement of a tiny rare-earth magnet, which can be safely and discreetly attached to the surface of an object. The MAP sensor is placed nearby—either behind a hanging piece or beneath the surface of a seated object. Any movement of either the asset or sensor triggers an immediate audible alarm. When ambient magnetic conditions call for more flexibility MAP v2 can be easily switched to accelerometer mode and the sensor is attached directly to the back of a painting. MAP protects 24/7 by simply and effectively alarming each individual asset.

MAP v2 sensors communicate with DSC's self-contained Impassa control panel, an industry standard with over a decade of dependable service. Sensors are pre-enrolled in the panel so the system ships as plug-and-play right out of the box. Simply plug into any standard power outlet. There are no wires to run and no security installer is required. Additional sensors—up to 64—can easily be added. Once a show is completed, simply unplug the panel. All sensors are kept in memory for the next show or application.

The Impassa panel can be upgraded with a phone module for texts and calls from a central monitoring station. The panel also has two programmable outlets for integration into a general security system. The MAP System Silver is the ideal solution for complete and affordable protection of assets

### **MAP Sensor Features**

- Simple and discreet application in either magnetometer or accelerometer mode
- Magnets available for any application, regardless of size
- The safest solution for art and assets of any value
- 400 ft. sensor transmission can be enhanced with repeaters

### **MAP System Silver Features**

- Pre-programmed sensors with unique digital ID ship ready to install
- 64 wireless zone capacity
- Large panel keyboard and easy to read LED display
- Panel siren with capacity for 4 remote wireless sirens
- Completely portable. Use from show-to-show or gallery-to-gallery
- Upgrade with telephony and integrate into access control systems

### **Specifications**

- Sensor dimensions 2" x 2" x 1/4"
- Sensors use 2 x CR2450 Lithium coin cell batteries with 4-5 year life.
- Impassa panel UL tested
- Panel back-up battery, 24 hrs. fully charged.
- Standard industry panel check in with sensors every 60 minutes
